NEW WINDOWS SOFTWARE !
UPGRADE NOW

The Bel-2000 is the only electronic hardness tester available on the market. It is the Industry's standard in hardness testing on wound rolls.

All Bel-2000 Units come with everything pictured, including a heavy duty flight case for storage and transport, and the Bel-2000 software that works on any Windows based operating system.

The Bel-2000 is strongly recommended for hard paper rolls only, but some customers have been successful with using it on some thicker films and thicker plastics.
